Citi Research is a division of Citigroup Global Markets Inc. (the "Firm"), which does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Certain products (not inconsistent with the author's published research) are available only on Citi's portals. Presentation prepared on 9 July.

Summary of Trade Ideas

The summer is magic

	Boring scenario	Volatile scenario
Money markets	Receive OIS 2y1y @24bp	Pay Mar ECB @3bp
Bund	Sell RXU4 144.50 Sep-14 puts @12 cents	Buy OBL Apr-19 vs UST Apr-19 @135bp
Yield curve	Receive EUR 10y2y vs pay EUR 12y3y @9bp	Receive EUR 20y10y vs pay EUR 30y10y @-13bp
Swaps RV	Receive EUR 1y2y/1y10y/1y30y @69bp	Pay EUR 1y1y/3y1y/5y2y @-63bp
Swap spreads	Sell BKO Jun-16 TED @17.5bp	Buy OEU4 ASW vs DUU4 & RXU4 @17.5bp
EGB	Bonos and BTPs compression vs Bunds	Sell OT 10y @3.58%
Inflation	Sell OATei24 BE @136bp	EUR 2/5s HICPxt flattener @45bp
Volatility	Sell EUR 1y30y straddle @50bpvol	Buy EUR 2y2y 50bp payer spread @25.5 cents
UK	Buy Gilt Jul-19 vs UST Jul-19 @33bp	Gilt 2/5s flattener @121bp
SSA	Buy KfW Jul-21 vs DSL Jul-21 @0bp	Buy KfW Jul-21 vs EFSF Jul-21 @7.5bp
Covered Bonds	Buy MONTE Feb-18 vs DKRED Jan-18 @111bp	Buy ISPIM Sep-19 vs Oct-19 @52bp
Regulation	Buy NEDWBK Jan-21 vs OAT Oct-20 @24bp	Buy DBR Jan-20 vs sell DANBNK Feb-20 @45bp

Futures trading involves substantial risk of loss

1. The Trades

Money Markets – Boring Scenario

Rolling down to negative Eonia

Over the past 12 months, both the Euro\$ and the Euribor curve have aggressively re-priced a dovish scenario, while the Sterling strip is pricing in 80% of a hike by Nov-14 (and almost +125bp in 24 months). Given ECB's policy, a re-pricing of the FF curve would leave Euribors more or less unchanged.

The purest expression of ECB carry trades is via 1y-forwards like 2y1y (0.54%). Absent liquidity shocks (higher excess will be priced in as we move within 1m of the TLTRO's settlement → risk of negative Eonia), the trend towards lower 3m and 6m fixings should help the performance of these trades.

	Euribor				Euro\$				Short Sterling			
Date	Spot	-3m	-12m	Change	Spot	-3m	-12m	Change	Spot	-3m	-12m	Change
Sep-14	0.18	0.27	0.44	-0.26	0.24	0.26	0.65	-0.41	0.67	0.59	0.74	-0.07
Dec-14	0.16	0.28	0.51	-0.35	0.29	0.31	0.79	-0.50	0.89	0.72	0.81	0.08
Mar-15	0.16	0.30	0.59	-0.42	0.39	0.40	0.97	-0.58	1.13	0.91	0.90	0.23
Jun-15	0.17	0.33	0.68	-0.51	0.59	0.58	1.19	-0.60	1.38	1.12	1.03	0.35
Sep-15	0.19	0.38	0.78	-0.59	0.83	0.81	1.44	-0.61	1.62	1.34	1.19	0.43
Dec-15	0.22	0.43	0.89	-0.68	1.08	1.08	1.73	-0.65	1.85	1.56	1.38	0.47
Mar-16	0.25	0.50	1.03	-0.78	1.35	1.38	2.03	-0.68	2.06	1.77	1.58	0.48
Jun-16	0.30	0.59	1.17	-0.86	1.61	1.68	2.32	-0.70	2.25	1.97	1.79	0.46

TRADE: Receive OIS 2y1y @24bp, target 6bp, stop 30bp, carry +20bp/12m.

Source: Citi Research

Money Markets – Volatile Scenario

What if TLTRO demand is weak?

The baseline scenario sees excess liquidity increasing into year-end as a result of strong TLTRO demand.
Any surprise to this assumption will trigger severe fixing uncertainty and a potential re-pricing of Eonias.

The current ECB curve already deviates from a curve assuming full liquidity (and negative deposit rates). This is especially true for longer maturities.

A negative TLTRO-liquidity surprise should be played via near ECB-gaps as the market would assume additional liquidity measure in case of “unwarranted tightening” of conditions.

TRADE: Pay Mar ECB @3bp, target 15bp, stop 0bp, carry +2bp/6m.

Source: Citi Research

Bund – Boring Scenario

A mild drift towards higher yields

In our 2014 outlook, we were among the few houses forecasting lower Bund yields. We have revised our “equilibrium yield” to 1.5% following the ECB’s opening to QE. We’re looking for a gradual rise in yields over the medium-term, based on our inflation and potential growth forecasts.

JGBs and USTs provide us with a decent historical explanation of Bund yields. Draghi’s QE-talk has recently pulled Bund yields below this “fair value” by almost 30bp (consistent with €1trn of QE). Without exogenous/endogenous shocks, we expect Bunds to follow JGBs and USTs to higher yields into year end.

TRADE: Sell RXU4 144.50 Sep-14 puts @12c, expiry 22/8 (144.58 is 11/6 low)

Source: Citi Research

Bund – Volatile Scenario

The shock will come from USTs

Bunds follow Eurozone surprise indicators quite accurately. US data could surprise on the upside as expectations have been re-priced after a very weak Q1 GDP.

UST volatility will translate into Bund volatility, albeit with a very modest beta – a strong sign of “decoupling”.

Current beta looks very high compared to previous “FED exit” episodes. However, the 2014 sample includes only a bullish market. It is reasonable to assume that the TY/RX beta will be much lower in case of a UST sell-off.

In our view, the beta is likely to be 0.40 on average, which is lower than 0.51 observed during Greenspan’s 2004 exit.

TRADE: Buy OBL Apr-19 vs UST Apr-19 @135bp, target 175bp, stop 125bp, carry +2bp/6m.

Source: Citi Research

Yield Curve – Boring Scenario

Carry looks good – even in risk-adjusted terms

The ex-ante rolldown on typical ECB-carry trades (e.g. 2/5/10s on fwds) still looks very interesting despite the spot butterfly trading very close to the lows seen on the JPY curve during the QE/ZIRP period. Risk-adjusted carry is very interesting thanks to the gradual decline in volatility.

The EUR curve has still some room to converge to a full Japan-scenario. One of the main features of the JPY curve is the absence of the 7-12y hump.

ECB-carry trades with a strong conviction about “low-for-longer” should be positioned around the EUR-hump for maximum rolldown to Eonia.

TRADE: Receive EUR 10y2y vs pay EUR 12y3y @9bp, target 18bp, stop 5bp, carry 9bp/12m.

Source: Citi Research

Yield Curve – Volatile Scenario

Can the stock market sustain valuations in case of strong US data?

One popular ECB-carry trade is the long-end fwd-curve steepener (both 5/30s and 10/30s and their countless fwd combinations). The inverse relationship between curve shape and volatility underlines the short-gamma nature of these carry trades. A sudden change in liquidity conditions could be a threat to performance.

A further risk to complacent carry-traders could come from asset allocation. Regulatory funding ratios do not suffer despite very low 30y rates, because of equity's performance (note the breakdown in correlation). Any equity correction, perhaps triggered by FED's exit would put pension funds and inscos under regulatory pressure.

TRADE: Receive EUR 20y10y vs pay EUR 30y10y @-13bp, target 20bp, stop -20bp, carry -2bp/6m.

Source: Citi Research

Swaps RV – Boring Scenario

More pressure to weigh on the curvature of the swap rate term structure

The highest roll-down is enjoyed by 1y fwd 2s10s30s fly, which still trades at high premium vs. JPY. Assuming PCA weights, fly generates €567k over the first six-months, assuming €100m in the belly.

We classify the main types of butterflies in LHS chart where the x-axis refers to the forward starting date of the fly and the y-axis to a crude measure of one year rolldown obtained via forward par swap differences at one year intervals.

TRADE: Receive EUR 1y2y/1y10y/1y30y @69bp, target 55bp, stop 75bp. Carry +30bp/12m.

Source: Citi Research

Swaps RV – Volatile Scenario

Focus on the 5y point of the swap curve, arguably the main accumulation point at the current mkt juncture

The 1y1y/3y1y/5y2y fly is trading some 9bp above the all time low.

The fly correlates well with the 5y swap ($r > 0.95$). However, in sharp contrast to an outright paying position on the 5y swap, a short position in the fly rolls roughly flat assuming PCA weighted construction.

TRADE: Pay EUR 1y1y/3y1y/5y2y @-63bp, target -50bp, stop -68bp. Carry flat.

Source: Citi Research

Swap Spreads – Boring Scenario

ECB targeting liquidity & credit spreads

ECB's action has managed to break the relationship between European credit spreads and other indicator of risks (e.g. EM equity). The combination of liquidity and credit spread targeting will push ASW tighter and prevent any spike in spreads from being long lived.

Since 2008, the ECB has been on a mission to prevent money markets from having negative effects on investor confidence and the transmission of monetary policy. BOJ experience suggests that swap spreads will eventually drop to zero in an environment of extremely low volatility and almost infinite central bank liquidity.

TRADE: Sell BKO Jun-16 TED @17.5bp, target 10bp, stop 20bp, carry +0.5bp/6m.

Source: Citi Research

Swap Spreads – Volatile Scenario

Risk can only come from the EGB markets

The AQR could raise some questions about the sustainability of the bank-sovereign funding model. Furthermore, there seems to be a seasonality in the holding of domestic EGBs by Italian and Spanish banks.

An increase in EGB volatility would translate into a more generalised risk aversion and wider swap spreads.

With ECB excess liquidity in place, Schatz spreads are unlikely to outperform Bobls in a widening move (unless currency-redemption risk is resuscitated).

TRADE: Buy OEU4 ASW vs DUU4 & RXU4 ASW @17.5bp, target 30bp, stop 15bp, CTD carry +2.5bp.

Source: Citi Research

EGBs – Boring Scenario

The ongoing carry trade as yield compression between the periphery and the core continues

In the absence of negative catalysts and left to their own devices, we expect Bono and BTP spreads to continue tightening to Bunds. The periphery continues to normalise, and with rating pressure now to the upside and systemic risks at lows, the “boring scenario” is for ongoing yield compression

Domestic bank buying remains a key market support for longer dated sectors outside the main influence of ECB monetary policy. Since 2011, domestic bank holdings of their own sovereign debt has surged to €420bn in Italy and €288bn in Spain. Given that we do not see this dynamic reversing anytime soon, support for BTP and Bono markets should remain firm

TRADE: Hold 10yr Spanish and Italian spreads to Bunds at 140bp and 144bp targeting 120bp in Q4

Source: Citi Research

EGBs – Volatile Scenario

In the unlikely event of a rise in systemic stress / market volatility, non-core markets that are less liquid such as Portugal underperform other EGBs

Non-core markets such as Portugal have typically been correlated to systemic stress indicators such as Citi's GRAMI Index. Portugal has also had the more negative beta in times of market volatility and today has the smallest positive beta to Germany. Smaller market and less liquidity also probably played a part in PGB underperformance at the time of the May elections

TRADE: Sell 10y Portugal outright at 3.58%, targeting 5.0% in a scenario of heightened vol

Source: Citi Research

Euro Inflation – Boring Scenario

10yr euro break-even inflation spreads have been stuck in an 8bp range for 2mths. A boring scenario over the summer would see this continue. Now is a good time to sell break-evens, especially ahead of -ve carry in Sep.

Euro inflation curves are well priced for a sustained period of low inflation (and low prints over the summer). This limits the downside, especially given the possibility of more drastic action from the ECB. But at the same time, the poor inflation accrual, low real yields and heavy issuance is preventing break-evens from rallying. Break-evens are stuck in the range

The strong negative carry in September (thanks to the monthly fall in July HICPxT which this year is likely to be even more negative than usual) will soon come into view. With this in mind, we prefer to sell the rallies in euro break-evens (rather than buy the dips). Current levels offer an opportunity in our view.

TRADE: Sell OATei24 BE @136bp, target 128bp, stop 142bp, carry +10bp to 1 October (Citi forecast).

Source: Citi Research

Euro Inflation – Volatile Scenario

The market is already well priced for low inflation over the summer, so the surprise would be if inflation starts to pick-up more quickly than anticipated. This could prompt 2yr inflation to quickly re-price from multi-year lows.

While 5yr HICPxT has been stable in recent weeks, 2yr HICPxT has come under renewed pressure taking it back to multi-year lows. 2s5s HICPxT has steepened around 15bp over the last 2 months

The HICPxT curve is sensitive to realised inflation. Any upside inflation surprises (from food? energy?) would likely flatten the curve. Moreover, if annual inflation is finding a base, the curve may also flatten. As the chart shows, 2s5s tends to anticipate the cyclical turning points in inflation

TRADE: EUR 2/5s HICPxT flattener @45bp, target 33bp, stop 51bp.

Source: Citi Research

Volatility – Boring Scenario

Yet lower realised volatility will (continue to) support short volatility strategies

	1y	2y	3y	4y	5y	6y	7y	8y	9y	10y	15y	20y	30y
1y	239%	28%	21%	21%	23%	23%	27%	35%	46%	56%	109%	181%	314%
2y	37%	38%	29%	24%	22%	23%	26%	29%	32%	35%	45%	50%	53%
3y	36%	23%	18%	15%	16%	18%	18%	19%	19%	20%	23%	25%	25%
4y	9%	8%	7%	8%	9%	10%	12%	13%	14%	14%	15%	16%	16%
5y	4%	4%	5%	6%	7%	8%	9%	9%	10%	10%	11%	12%	11%
6y	3%	3%	4%	4%	4%	4%	5%	5%	6%	6%	6%	6%	5%
7y	1%	2%	2%	3%	3%	3%	4%	4%	4%	4%	4%	4%	3%
8y	1%	2%	2%	2%	3%	2%	3%	3%	3%	3%	3%	3%	1%
9y	1%	1%	1%	2%	2%	2%	2%	2%	2%	2%	2%	2%	1%
10y	1%	1%	1%	1%	1%	2%	2%	2%	2%	2%	1%	0%	0%
15y	-1%	-1%	-1%	-1%	-1%	-1%	-1%	-1%	-1%	-1%	-1%	-2%	-2%
20y	-2%	-2%	-2%	-2%	-2%	-2%	-2%	-2%	-2%	-2%	-2%	-3%	-3%
30y	-2%	-2%	-2%	-2%	-3%	-3%	-3%	-3%	-3%	-2%	-2%	-2%	-3%

Sweet spot for short vol strategies is 1y30y in terms of rolldown. Moreover, 1y30y options trade at a significantly high premium vs. realised vol.

Assuming an unchanged vol surface and term structure, we compute one year rolldown PnL from first shorting ATMF straddle and then unwinding the structure after we posit that it has it been held one year, unhedged. Rolldown is then normalised by the unwind price, to finally obtain a total return measure, as it were. In particular, for one year maturity options the unwind price is clearly the sum of present values of the underlying swaps.

TRADE: Sell EUR 1y30y straddle at 50bpvol, target 40bp, stop 53bp. Carry +2.8mln/6m (x100mln unh).

Source: Citi Research

Volatility – Volatile Scenario

Play higher vol & flatter skew in the top-left for the tail scenarios of liquidity crunch and upward surprise in CPI

Moreover, given the inverse relationship between level of rates and slope of the smile, the position sells the skew at extreme levels. The skew premium should fade in the scenario of rate normalisation.

Attractive hedge vs. liquidity cliff risk or surprise in CPI inflation is offered by long positions on 2y2y payer spread which leaves investors long vega at inception with 1x1 structure currently offering historically high payout ratio.

TRADE: Buy EUR 2y2y +50bp payer spread @25.5 cents. Max profit 100c. Carry -90% of prem/3m.

Source: Citi Research

Gilt – Boring Scenario

Gilts have held a 'special relationship' with Treasuries for several years. An example of a boring scenario for gilts over the summer would be one in which gilts continue to trade within a very tight range to Treasuries.

5-10yr gilts continue to act as 'substitutes' for USTs and trade with a high beta. More recently, the re-pricing of the first rate hike in the UK has taken gilts to the cheap-end of their range vs USTs. A boring summer would see the range hold and favour gilt outperformance.

Overseas investors were net sellers of gilts in Jan-Apr to the tune of £10.2bn. In May, there was a net inflow of £8.8bn. High relative yield levels are likely to prompt more inflows into gilts over the summer from overseas investors.

TRADE: Buy Gilt Jul-19 vs UST Jul-19 @33bp, target 26bp, stop 41bp, carry -0.9bp/2m.

Source: Citi Research

Gilt – Volatile Scenario

The market has moved to price in a high probability of a rate hike in Q4, but the market would be very unprepared for any data (such as a sudden pick-up in wage growth) or MPC rhetoric which pointed to a Q3 hike.

The 2s5 gilt curve remains historically steep, but is likely to flatten ahead of, and during, a hiking cycle. A Q3 rate hike can not be ruled out if the data strengthens even further. This would be a big surprise (the market prices 14% chance of an August hike) and would likely prompt 2s5s to flatten sharply, well beyond the forwards.

The most likely trigger for a sharp re-pricing of the front-end, and ultimately an even earlier rate hike, would be a sharp pick-up in real wage growth. Survey evidence, such as RECs, suggests that this is possible.

TRADE: Gilt 2/5s flattener, @121bp, target 90bp, stop 130bp, carry -4.5bp/3m.

Source: Citi Research

SSA – Boring Scenario

Shallower dips to buy on....we prefer cross market trades in the SSA RV hunt

We therefore prefer viewing core names vs other EMU governments in the hunt-for-yield environment. One example at the moment is the outperformance of the Netherlands vs KfW where it is now possible to move into the German agency at a small spread pick-up

KfW recently revised its 2014 funding volume down to €55bn-€60bn and is now 61% the way through. The fall in volatility and the hunt for yield now means that “buying on dips” is less feasible in the classic spread between SSAs and their reference governments. The boring scenario over the summer is likely to mean the low and range-bound spread dynamic continues

TRADE: Buy KfW Jul-21 vs DSL Jul-21 @0bp, target -6bp, stop +3bp.

Source: Citi Research

SSA – Volatile Scenario

Lower rates supras such as the EFSF underperform EIB, KfW and France in periods of volatility

In periods of enhanced market volatility, it is the higher beta, lower rated, less established supras that underperform such as the EFSF. At the peak of the crisis, 10yr ASW spreads reached 140bp; 10yr EFSF to swaps now trades at 6.5bp.

The risk-reward of holding the EFSF vs KfW is looking less and less enticing. We doubt the AA/A1 rated supra can trade at lower yields than KfW and spreads in the 7yr sector are now in single digits. KfW significantly outperforms in times of market volatility, hence in this scenario we would look to switch out of 7yr EFSF and into KfW

TRADE: Sell EFSF Jul-21 vs KfW Jul-21 @7.5bp, target 30bp, stop 0bp.

Source: Citi Research

Covered Bonds – Boring Scenario

Supportive environment (vs swaps): Net negative supply, positive rating cycle for covered bonds and a benevolent regulatory treatment

Betas and Correlations between covered bonds and sovereign bonds (1yr horizon). Peripheral covered bond segments have been following movements in government bond markets very strongly – semi-core segments have done so in an increasing manner

Spread convergence has run far but there is still some potential to perform (mid-asw, bp) MONTE has seen an upgrade to investment-grade recently at Moody's. This should make the covered bonds eligible for a bigger investment group. We continue to like the bonds and expect further outperformance.

TRADE: Buy MONTE Feb-18 vs sell DKRED Jan-18 @111bp, target 90bp, stop 125bp.

Source: Markit, Citi Research

Covered Bonds – Volatile Scenario

Very tight senior-covered base & step up in quality into covered. Generally, markets may have mispriced BRRD implications for senior bonds, but higher beta of unsecured should eventually be a trigger for spread widening.

Senior-covered spread for covered bond issuers from peripheral markets (yield spread, bp)

However, with many issuers the senior-covered spread is still at all-time lows. We would use this opportunity to step up in quality when times become volatile.

TRADE: Buy ISPIM Sep-19 vs sell ISPIM Oct-19 @52bp, target 100bp, stop 25bp.

Source: Citi Research; yield spread, bp

Regulatory Trends – Boring Scenario

The final composition of the LCR is key for spread markets. Expect a decision by September.

Most regions, agencies and supras will be eligible as HQLA assets in the Level 1 bucket. Even implicitly guaranteed agencies like NEDWBK would be defined as Level 1 assets.

ECAI 1 CRR compliant covered bonds will be eligible as Level 1 assets while ECAI 2 CRR compliant covered bonds will be eligible as Level 2A assets. This should support (semi-) core covered bonds to EGBs.

TRADE: Buy NEDWBK Jan-21 vs sell OAT Oct-20 @24bp, target 12bp, stop 30bp

Source: Citi Research; yield spread, bp

Regulatory Trends – Volatile Scenario

Several unanswered questions, esp. for regional debt with a risk weight of 20%. The most volatile scenario for covered bonds would be if they were treated following B3 recommendation, i.e. as Level 2A assets.

Dutch agencies BNG and NEDWBK rallied strongly given the expectation of both agencies becoming eligible for Level 1 assets. In the adverse scenario (Level 2A), we would prefer DSL to BNG, especially in the 5yr sector.

The Danish covered bond market would be affected most severely if covered bonds were defined as Level 2A assets. We would expect Danish covered bonds to widen slightly and underperform on a cross-asset basis.

TRADE: Buy DBR Jan-20 vs sell DANBNK Feb-20 @45bp, target 60bp, stop 35bp

Appendix A-1

Analyst Certification

The research analyst(s) primarily responsible for the preparation and content of this research report are named in bold text in the author block at the front of the product except for those sections where an analyst's name appears in bold alongside content which is attributable to that analyst. Each of these analyst(s) certify, with respect to the section(s) of the report for which they are responsible, that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc and its affiliates. No part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendation(s) or view(s) expressed by that research analyst in this report.

IMPORTANT DISCLOSURES

Analysts' compensation is determined based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates ("the Firm"). Like all Firm employees, analysts receive compensation that is impacted by overall firm profitability which includes investment banking revenues.

The Firm is a market maker in the publicly traded equity securities of Intesa Sanpaolo, Danske Bank A/S.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/epublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Historical disclosures (for up to the past three years) will be provided upon request.

NON-US RESEARCH ANALYST DISCLOSURES

Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the NYSE Rule 472 and NASD Rule 2711 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Ltd	Alessandro Tentori; Matteo Regesta; Jamie Searle; Peter Goves
Citigroup Global Markets Deutschland AG	Michael Spies
Citigroup Global Markets India Private Limited	Aman Bansal, CFA

OTHER DISCLOSURES

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to Banca Monte dei Paschi di Siena SpA, EUROPEAN FINANCIAL STABILITY FACILITY SA, Danske Bank A/S. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental research report, it is the intention of Citi Research to provide research coverage of the/those issuer(s) mentioned therein, including in response to news affecting this issuer, subject to applicable quiet periods and capacity constraints. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

Important Disclosures for Bell Potter Customers: Bell Potter is making this Product available to its clients pursuant to an agreement with Citigroup Global Markets Australia Pty Limited. Neither Citigroup Global Markets Australia Pty Limited nor any of its affiliates has made any determination as to the suitability of the information provided herein and clients should consult with their Bell Potter financial advisor before making any investment decision.

Citigroup Centre, Canada Square, Canary Wharf, London, E14 5LB. The Product is made available in **United States** by Citigroup Global Markets Inc, which is a member of FINRA and registered with the US Securities and Exchange Commission. 388 Greenwich Street, New York, NY 10013. Unless specified to the contrary, within EU Member States, the Product is made available by Citigroup Global Markets Limited, which is authorised by the PRA and regulated by the FCA and the PRA. Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Many European regulators require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Compensation of equity research analysts is determined by equity research management and Citigroup's senior management and is not linked to specific transactions or recommendations.

The Product is not to be construed as providing investment services in any jurisdiction where the provision of such services would not be permitted.

Subject to the nature and contents of the Product, the investments described therein are subject to fluctuations in price and/or value and investors may get back less than originally invested. Certain high-volatility investments can be subject to sudden and large falls in value that could equal or exceed the amount invested. Certain investments contained in the Product may have tax implications for private customers whereby levels and basis of taxation may be subject to change. If in doubt, investors should seek advice from a tax adviser. The Product does not purport to identify the nature of the specific market or other risks associated with a particular transaction. Advice in the Product is general and should not be construed as personal advice given it has been prepared without taking account of the objectives, financial situation or needs of any particular investor. Accordingly, investors should, before acting on the advice, consider the appropriateness of the advice, having regard to their objectives, financial situation and needs. Prior to acquiring any financial product, it is the client's responsibility to obtain the relevant offer document for the product and consider it before making a decision as to whether to purchase the product.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via Citi's proprietary distribution platforms; however such research will not

contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated.

The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with Citi and legal and regulatory constraints.

Citi Research product may source data from dataCentral. dataCentral is a Citi Research proprietary database, which includes Citi estimates, data from company reports and feeds from Thomson Reuters.
