Recipe for illiquid markets

Theory to encourage liquidity	Practice
Numerous, heterogeneous market participants	Large asset managers increasingly dominant
At least some non-mark-to-market investors	Mark-to-market ever more prevalent
Unsecured lending less procyclical	Secured lending near-universal
Long investor lock-ups	Widespread promise of “daily liquidity”
Long-term performance measurement	Annual reporting and reallocation ever more frequent; election cycle shorter than credit cycle
Disconnected markets	24x7 universal information
A variety of investment styles	Everyone trading off monetary policy
Regular, small failures as a reminder of risk	Continuing bailouts; defaults suppressed
Redundancy: systems designed with failure in mind	Central clearing / ever more bank capital
Recognising limits to central banks’ omnipotence	Central banks as “only game in town”
